Dear Prof. J. Stockel and Dr. V. Svoboda!

V.N. Karazin Kharkiv National University express our deep gratitude to you personally and to Czech Technical University in Prague for the chance given to the students of our University to take part in remote control of Tokamak GOLEM operation at Czech Technical University in Prague.

This remote experiment had given them the unique experience not only directly in studying the start-up phase of plasma discharge and measurements of basic plasma parameters at real fusion device. It provided them the experience in communicating with you, making joint efforts. It had confirmed unity of the world fusion community, belonging of our students to this community, recognition of Kharkiv physicists all over the world.

We hope to maintain the existing collaboration, and also to broaden it to other spheres, in particular, to joint research in the field of controlled nuclear fusion research and radiation material science.

With my most respect,

President, Doctor of Sciences (Sociology), Full Professor, Academician of the National Academy of Sciences of Ukraine, Corresponding Member of the Academy Pedagogical Sciences of Ukraine

Vil S. Bakirov
