FuseNet presents: the European Fusion Teacher Day 2020!

A fully remote event for teachers throughout all of Europe on 17-6-2020.

An event for all science and physics teachers in Europe consisting of an afternoon that showcases both the newest developments of nuclear fusion and newly developed classroom materials on fusion. During the day you will get a look behind the scenes of the most groundbreaking fusion experiments of today and learn about fusion first-hand from experts in the field.

FuseNet aims to make knowledge of nuclear fusion accessible for everyone. For the future of nuclear fusion a skilled and diverse fusion workforce is needed: young people have to be attracted to the idea (and the community) of fusion research. For most people, high school teachers are the first ambassadors of science that they meet in their lives: the impact of enthusiastic role-models with a passion for science on eager students is incredible. Therefore, FuseNet wants to reach out to you and as such, this event is made specifically for you.

On these pages you can sign up for the event and find all relevant information, from the program for the day, to a step by step manual on how to set up your remote connection.

Ends 17 Jun 2020, 16:30
Europe/Amsterdam
