The GOLEM tokamak basic characteristics

The grandfather of all tokamaks (ITER newsline 06/18)

- Vessel major radius: $R_0 = 0.4$ m
- Vessel minor radius: $r_0 = 0.1$ m
- Maximum plasma current:
 $I_p^{\max} < 8$ kA
- Maximum toroidal magnetic field: $B_t^{\max} < 0.5$ T
- Typical electron density:
 $< n_e > \in (0.2, 3) \cdot 10^{19}$ m⁻³
- Maximum electron temperature:
 $T_e^{\max} < 80$ eV
- Maximum discharge duration:
 $\tau_p^{\max} < 25$ ms

Tokamak

From Wikipedia, the free encyclopedia

This article is about the fusion reaction device. For other uses, see [Tokamak \(disambiguation\)](#).

A **tokamak** (Russian: **токамак**) is a device that uses a powerful magnetic field to confine plasma in the shape of a torus. Achieving a stable plasma equilibrium requires magnetic field lines that move around the torus in a helical shape. Such a helical field can be generated by adding a toroidal field

it decays into a proton and electron with the emission of energy. When the time comes to actually try to make electricity from a tokamak-based reactor, some of the neutrons produced in the fusion process would be absorbed by a liquid metal blanket and their kinetic energy would be used in heat-transfer processes to ultimately turn a generator.

Experimental tokamaks [\[edit\]](#)

Currently in operation [\[edit\]](#)

(in chronological order of start of operations)

- . 1960s: TM1-MH (since 1977 Castor; since 2007 Golem^[12]) in Prague, Czech Republic. In operation in Kurchatov Institute since early 1960s but renamed to Castor in 1977 and moved to IPP CAS,^[13] Prague; in 2007 moved to FNSPE, Czech Technical University in Prague and renamed to Golem.^[14]
- . 1975: T-10, in Kurchatov Institute, Moscow, Russia (formerly Soviet Union); 2 MW
- . 1983: Joint European Torus (JET), in Culham, United Kingdom
- . 1985: JT-60, in Naka, Ibaraki Prefecture, Japan; (Currently undergoing upgrade to Super, Advanced model)
- . 1987: STOR-M, University of Saskatchewan, Canada; first demonstration of alternating current in a tokamak.
- . 1988: Tore Supra,^[15] at the CEA, Cadarache, France
- . 1989: Aditya, at Institute for Plasma Research (IPR) in Gujarat, India
- . 1980s: DIII-D,^[16] in San Diego, USA; operated by General Atomics since the late 1980s
- . 1989: COMPASS,^[13] in Prague, Czech Republic; in operation since 2008, previously operated from 1989 to 1999 in Culham, United Kingdom
- . 1990: FTU, in Frascati, Italy
- . 1991: Tokamak ISTTOK,^[17] at the Instituto de Plasmas e Fusão Nuclear, Lisbon, Portugal;
- . 1991: ASDEX Upgrade, in Garching, Germany

GOLEM

GOLEM

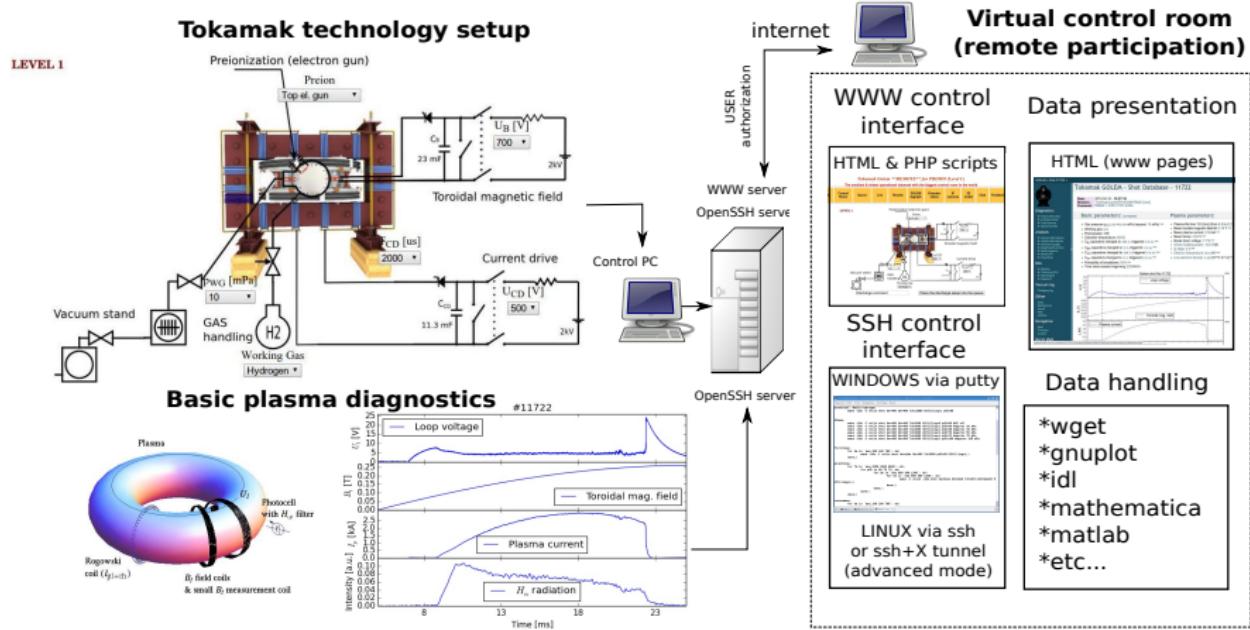

... somewhere, in the ancient cellars of Prague,

there is hidden indeed "infernal" power. Yet it is the very power of celestial stars themselves. Calmly dormant, awaiting mankind to discover the magic key, to use this power for their benefit...

At the end of the 16th century, in the times when the Czech lands were ruled by Emperor Rudolf II, in Prague, there were Rabbi Judah Loew, well known alchemist, thinker, scholar, writer and inventor of the legendary GOLEM - a clay creature inspired with the Universe power that pursued his master's command after being brought to life with a shem, . Golem is not perceived as a symbol of evil, but rather as a symbol of power which might be useful but is very challenging to handle. To learn more of the Golem legend, see e.g. [?].

The screenshot shows a control interface for the GOLEM experiment. At the top, there are tabs for 'Introduction', 'Working gas', 'Preparation', 'Magnetic field' (which is selected), 'Electric field', 'Submit', and various help links. A note below the tabs says: 'Set the voltage on the capacitors to be discharged into the toroidal field coils. The higher the voltage, the larger the magnetic field confining the plasma.' Below this, a section titled 'Preionization (electron gun)' shows a schematic of the vacuum system and gas handling. Two electrical circuit diagrams are shown: one for the 'Toroidal magnetic field' with a capacitor $C_b = 67.5$ mF and a 2kV source, and another for the 'Toroidal electric field' with a capacitor $C_b = 133$ mF and a 2kV source. A slider at the bottom allows setting the capacitor voltage U_b between 0 and 1000 V, with a recommended value of approximately 600 V. At the bottom left are 'Next' and 'Set recommended value' buttons. On the right, there is a 3D rendering of the plasma chamber showing the internal structure and the paths of the magnetic field lines generated by the toroidal field coils.

Introduction Working gas Preionization Magnetic field **Electric field** Submit

Set the voltage on the capacitors to be discharged into the primary transformer winding. The higher the voltage, the larger the electric field creating and heating the plasma. The electric field capacitors are discharged after a configurable delay with respect to the magnetic field capacitors.

Preionization (electron gun)

Vacuum stand GAS handling

The diagram shows a cross-section of a vacuum chamber containing an electron gun. It is connected to a power supply circuit. The circuit includes a 'Toroidal magnetic field' section with a capacitor $C_{B_t} = 87.5 \text{ mF}$ and a voltage of 2kV. Below it is a 'Toroidal electric field' section with a capacitor $C_{E_t} = 13.5 \text{ mF}$ and a voltage of 2kV. A time delay $t_{B,E}$ is set to 0 microseconds. A 'Capacitor voltage $U_0 = 400 \text{ V}$ ' slider is also present.

Time delay of electric field start after the magnetic field starts $t_{B,E} = 0$ microseconds

Capacitor voltage $U_0 = 400 \text{ V}$

Next Set recommended value

GNU Wget

GNU Wget is a free software package for retrieving files using HTTP, HTTPS and FTP, the most widely-used Internet protocols. It is a non-interactive commandline tool, so it may easily be called from scripts, cron jobs, terminals without X-Windows support, etc.

- Runs on most UNIX-like operating systems as well as Microsoft Windows.
- Homepage: <http://www.gnu.org/software/wget/>
- Basic usage:
 - To get U_i : wget http://golem.fjfi.cvut.cz/utils/data/<\#ShotNo>/loop_voltage
 - To get whole shot: wget -r -nH --cut-dirs=3 --no-parent -l2 -Pshot http://golem.fjfi.cvut.cz/shots/<\#ShotNo>
