\def\title{Global Tokamak Experiment}
\def\basepath{TrainingCourses/Others/1210underscoreGTE}

\def\description{In a special event called the Global Tokamak Experiment, using
a web based system, over 4 hours 38 participants from 10 different countries carried out 83 plasma discharges. Due to the
    global nature
of this experiment a security feature using access keys (also referred to as tokens) were distributed to limit the usage of
the tokamak. A login based system identified between participant, and experiment manager. Thus the machine was based
    in the
Czech Republic, the experiment manager in the UK, and the participants in many other countries.}

\def\quotations{\begin{quotation}\textit{It was great! .. Many thanks to Billy for the excellent site design and
 to Vojtech Svoboda and his team for the interesting
 experiment. I hope that it will ever happen again. I and another student
 has already been discussed the results of shots yesterday the whole
 evening and today, a good idea to make the discussion more global=D.} \flushright{GTE participant}\end{quotation}}
