Faculty of Nuclear Sciences and Physical Engineering Czech Technical University in Prague

FNSPE main building in Prague

FNSPE insignia

CTU ceremony hall

- CTU founded in 1707 by the emperor Joseph I.
- CTU approximately 2200 staff members, 16000 undergraduate students, 9000 graduate and PhD students. (\approx 2500 foreign students).
- FNSPE established in 1955 with the mission to train new experts for the emerging Czechoslovak nuclear programme.
- FNSPE currently a centre of education and research specialised in boundary fields between modern science and their applications in technologies, medicine, economy, biology, ecology, and other fields.

Scientific group/ education specialization The Physics of Plasma and Thermonuclear fusion

99.999 % Universe is in the Plasma state of matter

Thermal power plant - basic principle

The question:

?? WHAT TO BURN ??

Small μ Sun in the terestriall conditions ??

Can we harness the energy that drives the Sun/stars?

Tokamak mission: to create μ Sun in the terrestrial conditions

$$^{2}_{1}\mathsf{D}_{(10keV)} + ^{3}_{1}\mathsf{T}_{(10keV)} \Rightarrow ^{4}_{2}\mathsf{He}_{(3.5MeV)} + \mathsf{n}_{(14.1MeV)}$$

The task: to heat (up to 100 million degrees) DT fuel and confine it (up to 30 years) in the high temperature plasma state of matter to produce He & fusion energy.

Binding energy releasing I

Fusion Reaction

- 6 Conclusion

Let's start with the tokamak GOLEM - the smallest tokamak in the World with the biggest controll room

The GOLEM tokamak for education - historical background

... somewhere, in the ancient cellars of Prague,

there is hidden indeed "infernal" power. Yet it is the very power of celestial stars themselves. Calmly dormant, awaiting mankind to discover the magic key, to use this power for their benefit...

At the end of the 16th century, in the times when the Czech lands were ruled by Emperor Rudolf II, in Prague, there were Rabbi Judah Loew, well known alchemist, thinker, scholar, writer and inventor of the legendary GOLEM - a clay creature inspired with the Universe power that pursued his master's command after being brought to life with a shem, . Golem is not perceived as a symbol of evil, but rather as a symbol of power which might be useful but is very challenging to handle. To learn more of the Golem legend, see e.g. Wikipedia/Golem.

Tokamak (GOLEM) basic concept to confine and heat the plasma

The GOLEM tokamak basic characteristics The grandfather of all tokamaks (ITER newsline 06/18)

- Vessel major radius $R_0 = 0.4$ m
- Vessel minor radius r₀ = 0.1 m
- Plasma minor radius: *a* ≈ 0.06 m
- Maximum toroidal magnetic field B_t^{max} < 0.5 T
- Maximum plasma current I^{max}_p < 8 kA
- Typical electron density: $< n_e > \approx 0.2 - 3 \times 10^{19} \text{ m}^{-3}$
- Effective ion charge: $Z_{eff} \approx 2.5$
- Maximum electron temperature
 T_e^{max} < 100 eV
- Maximum ion temperature $T_{max}^{max} < 50 \text{ eV}$

The global schematic overview of the GOLEM experiment

The GOLEM tokamak - standard diagnostics

"Typical", well executed discharge @ GOLEM

The GOLEM tokamak mission

Education i) on-site ii) remote

Research i) Plasma edge studies using probe techniques ii) Runaway electron studies

Hands on the GOLEM tokamak

Hands on the GOLEM tokamak

- Laboratory Practice for Basic course of Physics 2015-19 (CT University Bachelor level).
- Advanced plasma training course 2014-19 (CT University Master level).
- Week of scientists 2013-19 (Czech republic High school level).
- International Golem Training Course 2013,2019 (Master and PhD level).

Bachelor & Master thesis made @ tokamak GOLEM

- Bachelor thesis: Magnetic field configurations and their measurement, Interactive model, Plasma flow velocity measurements using Mach probe arrays, Virtual model, Bolometric measurements, Breakdown studies, Vertical plasma stabilization.
- Master thesis: Microwave interferometry, Remote operation of the vertical plasma stabilization, Measurements of magnetic fields.

6 Conclusion

REs@GOLEM: A basic observation

- A new Nal(TI) scintillation detector with a photomultiplier tube was installed
- Kruskal-Bernstein criterion used for estimating the RE generation rate
- RE generation observed during the breakdown phase as well as during position instabilities
- Plasma recreation observed after the loss of RE (probably due to secondary electrons)
